Custom Mix Cattle Feed MEDICATED

Active Drug Ingredient: MELENGE	STRO	L ACETATE (MGA)	%	
	(Each p	oound contains	mg MGA	.)

0.25 to 0.50 mg/head/day	
	For increased rate of weight gain and improved feed efficiency
(Feed at a rate of 0.5-2.0 lb/head/day)	and suppression of estrus (heat) in heifers fed for slaughter
0.50 mg/head/day	
(Feed at a rate of 0.5-2.0 lb/head/day)	For suppression of estrus (heat) in heifers intended for reproduction

Feed _____ mg of MGA.

Caution: Heifers intended for reproduction: Do not exceed 24 days of feeding. A reduced conception rate can be expected if heifers are bred as estruses observed within 1 to 12 days after withdrawal of Melengestrol Acetate, whereas heifers bred at subsequent observed estrus are expected to have normal conception rates. Withdrawal periods of 3 to 5 days should be avoided to prevent the possibility that heifers may come into estrus (heat) at loading time. Not effective in steers and spayed heifers.
