*As the Insect Growth Regulator ALTOSID®

**CAUTION: KEEP OUT OF REACH OF CHILDREN
USE ONLY AS DIRECTED**

THIS SUPPLEMENT SHOULD BE USED IN ACCORDANCE WITH THE DIRECTIONS ON THIS TAG.

Storage and Disposal: Do not contaminate water, food or feed by storage or disposal.
Product Disposal: Wastes resulting from the use of this product may be disposed of on-site or at an approved waste disposal facility.

FEEDING AND MANAGEMENT INSTRUCTIONS

When used as directed, .01% Altocid Mineral will provide sufficient S-methoprene insect growth regulator to prevent the emergence of adult horn flies from manure of treated cattle. Existing adult horn flies will not be affected. Start feeding before horn flies appear and continue use until cold weather marks the end of the horn fly season. Allow free choice to cattle. Cattle should consume an average of 0.4 ounces of .01% Altocid Mineral per 100 lbs. of body weight per day, which is equivalent to 4 ounces per day for a 1,000 pound animal.

1. Assure cattle are not starved for nutrients in .01% Altocid Mineral by providing them prior to feeding .01% Altocid Mineral.
2. Offer cattle 50 pounds of .01% Altocid Mineral for every 15 head of cattle.
3. Remove all other self limiting nutritional supplements.
4. Locate .01% Altocid Mineral where cattle congregate (watering, loafing, shade areas).
5. Replenish .01% Altocid Mineral on a regular basis as needed.
6. If intake of .01% Altocid Mineral is below 0.4 ounces per 100 lbs. animal body weight per day, increase the number of feeding locations and/or change location(s) to areas more frequented by cattle.
7. If intake of .01% Altocid Mineral is above 0.4 ounces per 100 lbs. animal body weight per day, reduce the number of feeding locations and/or change location(s) to areas less frequented by cattle.
8. Introduction of this product after adult horn fly infestation is established will require treatment of cattle with adulticides if elimination of the adult fly population is desired.

Introduction of this product after an adult horn fly infestation is established will require treatment of cattle with adulticides if immediate elimination of the adult fly population is desired.
